1.0 Identify the goal of your advertisement

This advertisement aims to raise awareness among Australian families of seniors aged 75+ with chronic diseases, isolated or disabled elders about Xiaomi Pic's benefits, which encourages them to buy Xiaomi Pic.

2.0 Appeal to Target Audience

2.1 Choice of appeal

In social marketing, rational appeals using facts and data to influence audience judgment for rational decisions are prevalent (Casais and Pereira, 2021). Thus, this advertisement chooses the "Rational Appeal". This advertisement targets at the families of the elderly, who care deeply about the elderly at home. Zhang et al., (2014) mentions that rational appeals are more effective for credibility-based services. This advertisement compares the elderly's state before and after using Xiaomi Pic, clearly showing how it solves the elderly's problems, like relieving loneliness. This transparency builds trust by showing practical effects, meeting the audience's rational need for real-world solutions. One way of Rational Appeals in Digital Marketing is Feature-Based Advertising (See Figure 1). Thus, features like fall detection reinforce this by directly demonstrating the product's problem-solving ability, making it highly appealing to the target audience. This aligns with the "Rational

Appeal" goal: presenting the product's rationality and necessity to make consumers feel it's a need.

2.2 Choice of colors

Initially, a solitary elderly figure in a low-brightness, monotonous color palette creates a desolate, lonely atmosphere. Later, high-color saturation with bright, vivid hues contrasting with the cool-toned opening, enhances scene vibrancy alongside the colorful product, creating visual impact. When introducing the product subsequently, blue is used for the background, bright yellow for the text and red for discount and price. Red is associated with price discounts and savings, and it's more exciting (Kim et al., 2018). Thus, customers would be more likely to purchase it. Blue has been chosen as the preferred color for law enforcement officers globally because it is associated with trust and reliability(Hailey, 2025). Therefore, using a blue background to

introduce products can make customers have more trust in our products(See Figure 2 & 3). Moreover, red is associated with price discounts and savings, and it's more exciting (Kim et al., 2018). Thus, customers would be more likely to purchase it.

2.3 Choice of images

The two photos selected for the advertisement are highly ingenious(See Figure 4 & 5). In color, the first photo's dark, low-saturation tone creates dull loneliness, while the second's bright, high-saturation hues convey joy and vitality. In character states, the first image shows the character in a downcast posture (negative state before using the product), while the second image shows the character with a beaming expression (positive state after using the product).. The stark contrasts in color and state grab attention, highlighting the product's power to shift from negativity to positivity and stimulating purchase intent.

2.4 Choice of layout

The advertisement features a uniquely designed layout. At the beginning, a clock image beside that of a lonely elder, along with descriptions of their hardships, suggests they've been forgotten by time, echoing the opening text and grabbing the attention of their family members. In the product introduction, arrows highlight key functions, helping customers focus on important details. Concise text clearly explains the Xiaomi Pic's uses, and the moderately large font ensures a comfortable viewing experience while effectively conveying the ad's message.

3.0 AIDA Model Components

3.1 Cues for Attention

It adopts eye-catching visual effects and emotional scenes to attract the audience. In the advertisement, the text "Time has overlooked them who have stopped." is in white on a black background. Furthermore, starting with a lonely old person's image and soothing yet sorrowful music, it quickly grabs the audience's attention, evoking sentiment and reminding them of homebound elders.

3.2 Cues for Interest

The sound of a finger snap, the suddenly cheerful music, along with the text "Do you want to make your loved one's world from dark to colorfulness" stirs the audience's interest. And the picture of an elderly person beaming in

front of the Xiaomi Pic demonstrates that the Xiaomi Pic can enhance the life quality of the elderly at home.

3.3 Cues for Desire

Emphasize the benefits the product brings to the elderly and their families to stimulate the desire to purchase. By elaborating on the functions and features of Xiaomi Pic, the desire of the audience is ignited. Meanwhile, text reminders that the Xiaomi Pic is a keeping privacy and cutting-edge tech product developed by a professional team enhance customers' trust, further boosting their purchasing desire.

3.4 Cues for Action

At the end of the advertisement, a compelling call-to-action prompts immediate purchases. Clear purchasing information and exclusive time-limited offers target the audience's desire to care for elderly family members. The tagline, "Send this care to the elderly at home now. Limited stock, first come, first served!" highlights the product as a symbol of filial love while creating a sense of urgency. It subtly implies that hesitation means missing out on both great deals and timely care, effectively driving quick buying decisions.

4.0 Ethical considerations

Privacy is not only an important component of CSR but also a means for enterprises to achieve CSR goals(Allen & Peloza, 2015). Thus, Xiaomi Pic uses GPT-4 technology and employs end-to-end encryption to ensure the

security of data during processing, avoiding the infringement of user privacy caused by data breaches.

From the triple bottom line perspective, Xiaomi Pic has a remarkable positive social impact. As Elkington's(2018) triple bottom line theory stresses, an enterprise's success considers economic, environmental and social performance, with the social dimension focusing on social well-being contribution. Xiaomi Pic's enhancement of elderly social well-being aligns with this theory. Its chat function combats loneliness and strengthens social bonds, meeting target users' expectations for elderly family members' quality of life. By prioritizing social well-being, Xiaomi demonstrates a focus beyond financial and environmental responsibilities to include social ethics.

5.0 Determine where you want to share your poster

YouTube. As of 2024, YouTube has approximately 20.8 million users in Australia, accounting for about 78.1% of the country's population which indicates that YouTube has a massive user base and high advertising reach in Australia(Redresearch, 2025). The platform's diverse content ensures precise targeting of households with elderly members. Moreover, YouTube's varied ad formats and creative tools attract attention, while its analytics optimize ad strategies for better precision and efficiency.
