

1 Identify the goal of your advertisement

The purpose of this advertisement is to attract Australian university students and young white-collar worker, increasing their awareness and understanding of the Kao Megu Calm Silent Steam Eye Mask and its key features. The advertisement encouraging the target market to purchase the product, while also promoting a self-care lifestyle.

2 Appeals to Target Audience

2.1 Choice of appeal

Rational appeals focus on product-related attributes such as quality, economy, value and performance and they persuade consumers through logical reasoning and self-interest (Kotler & Armstrong, 2022). As a newly launched multifunctional product, the Kao Megu Calm Silent Steam Eye Mask is designed to meet multiple consumer needs simultaneously. As it is an innovative product in the market, the use of rational appeal highlights the functional value of it, increasing perceived usefulness and encouraging purchase intention (Percy & Elliott, 2016). In the advertisement, it highlights the two core functions—noise reduction and eye fatigue relief—and their mechanisms, specifically emphasizing a dual-function design that meets consumer demands for functionality, efficiency and value for money. In addition, it also uses emotional appeal. Emotional appeals are more effective to younger audiences because

they tend to be more responsive to imagery, mood and symbolic meanings in advertisement (Belch & Belch, 2021). The storyline of it is a tired girl working late at night, which can effectively create resonance and interest among the target market.

2.2 Choice of color(s)

In advertising, color is widely recognized as a key factor influencing emotions and visual attention, enhancing audiences' engagement with the content (Labrecque & Milne, 2012; Elliot & Maier, 2014). In the opening scene, a black background combined with yellow-white lighting is used to depict the protagonist working late at night. It creates a low-energy mood related to fatigue and yellow-white lighting enhances visual focus, so that it will direct the audience's attention to the exhausted protagonist. As Pieters, R., Wedel, M., & Batra, R. (2010) highlight, high visual contrast and differences in brightness can effectively attract viewers' attention to key elements in visual advertisements. In the product introduction stage, Bright Clean White is used as the dominant color scheme to improve visual clarity. It creates a sense of comfort and relief for the audience (Labrecque, L. I., & Milne, G. R., 2012), while also forming a strong contrast with the previous dark scene. Because of it, this transition helps enhance audience interest and strengthens product appeal.

2.3 Choice of image

The images selected in the advertisement are ingenious. The first two

imagines use close-up shots to highlight the product's core functional features, with concise text used to explain their key benefits. This combination of visuals and text improves clarity can effectively enhance audience engagement to make consumers better understand the product. The last image shows the character using our product lying in bed with a relaxed expression. It constructs a clear contrast with the previous fatigue. Therefore, it will further stimulate the target market's purchase intention.

2.4 Choice of layout

The text layout in the advertisement is unique. In order to align with the theme of sleep, the advertisement uses minimal spoken dialogue so that it creates a calm and relaxing atmosphere. Key information, such as the slogan, main message and product details, is displayed with a script-style font in a prominent position on the screen rather than in the traditional bottom placement, enhancing the overall feeling of the advertisement while effectively communicating its core message.

3.0 AIDA Model Components

3.1 Cues for Attention

At the beginning, a young woman is shown working late in a dimly lit room with only a desk lamp on. She looks tired and frustrated, occasionally rubbing her eyes. This opening does not directly present the product or any dialogue. Instead, it describes a common example of our target market at night so that

they will place themselves in the character's position, creating a sense of connection and identification. It will effectively reduce their resistance to advertisement and attract their attention.

3.2 Cues for Interest

After the initial scene, the catchphrase "After a long day of work and study, why not reward yourself with a soothing sleep?" appears on the screen, followed by followed by a shot on a brightly lit product. The catchphrase will further trigger the target market's memories and reflections on similar life stress and encourage them to think about how to reward themselves with a soothing sleep. The next close-up of the product shows that it is the solution to their problem, which will generate interest in the product among the target audience.

3.3 Cues for Desire

After the transition, a bright white background is used to briefly introduce the features of the ear and eye masks. The scene then returns to the original setting, showing the woman wearing the product and falling asleep peacefully. The slogan "Kao Megu Calm Silent Steam Eye Mask, your sleep guardian" appears on the screen. The explanation of the product's features and benefits will significantly improve the target market's understanding of the product, thereby increasing their purchase intention. The final scene shows the character sleeping comfortably with the eye mask, which reflects what the target market wants. Together with the slogan, it further increases their purchase desire.

3.4 Cues for Desire
